Module 7 · Activity

Which Rules Apply to Our Campus AI Tools?

The Rules Landscape · a fictional scenario

307307 BI Methods for Generative AI · AI Governance · University of Petra

Group name

Date	

How this activity works

- Work in groups of 3–4. Type your answers directly into the boxes.
- There is no single right answer. What matters is that you can explain each choice.
- **Suggested time:** Part A 10 min · Part B 20 min · Part C 10 min · Part D 15 min · Part E 10 min. Your lecturer may adjust this.
- Use the lecture slides to check a term. Rows shaded in green are worked examples.

The scenario (fictional)

The University of Petra is starting an exchange program with a partner university in the European Union. EU students will use several of the university's AI tools, so the AI governance team must decide which rules matter. The university plans to use six AI tools. Four are bought from outside vendors, and two are built by its own IT team.

The six tools

- **Admissions Ranker:** scores applicants and ranks them for admission. Bought from a vendor.
- **ExamWatch:** monitors students during online exams and flags "suspicious behavior". Bought from a vendor.
- **CourseMatch:** suggests elective courses, like a movie recommender. Built in-house.
- **Study Buddy:** a chatbot that answers student questions about registration and exams. Bought from a vendor.
- **PromoStudio:** creates marketing images and videos with AI. Built in-house.
- **Mood Monitor:** reads students' faces in lecture halls to infer their emotions, so lecturers can "adjust". Bought from a vendor.

Part A · Regulation, standard or framework?

For each item, decide whether it is a regulation, a standard or a framework. Say whether it is legally binding, and what it is mainly about.

Item	Type	Legally binding?	Main focus, in your own words
Example: GDPR	Regulation	Yes	Protects personal data and privacy, including data used by AI.
EU AI Act			
ISO/IEC 42001			
NIST AI RMF			
OECD AI Principles			
IEEE 7000 series			

Hint: a standard or framework can become mandatory if a law or a contract requires it.

Part B · Classify the six tools

Use the four steps from the lecture: (1) the purpose, (2) prohibited? (3) in a high-risk area? (4) a transparency duty? Then choose Prohibited, High, Limited or Minimal, and explain.

Tool	Which step decided it? Why?	Level	What must the university do?
Example: Spam filter (not one of the six)	Step 4: no high-risk area and no duty to tell people it is AI.	**Minimal**	No special legal duty. Follow good practice voluntarily.
Admissions Ranker			
ExamWatch			
CourseMatch			
Study Buddy			
PromoStudio			
Mood Monitor			

Hint: one tool may have two possible answers. Write down what would change the level, such as a new feature.

Part C · Provider or deployer?

Choose one high-risk tool from Part B. Say who is the provider and who is the deployer, and list at least two duties for each.

Question	Your answer
Example: tool and its roles	Resume screening tool. Provider: the vendor that built it. Deployer: the company using it to shortlist applicants.
Our tool	
Who is the provider?	
Provider duties (at least two)	
Who is the deployer?	
Deployer duties (at least two)	

Hint: think about documentation, human oversight, monitoring and incident reporting.

Part D · NIST AI RMF: one action per function

For the same tool, write one concrete action under each NIST function. Then say what the university does now (current profile) and what it should do (target profile) for one of them.

Function	What it asks for	An action for our tool
Example: Govern	Policies, roles and accountability	Name an AI system owner who reports incidents to the AI governance committee.
Govern	Policies, roles and accountability	
Map	Context, purpose, stakeholders and risks	
Measure	Test and monitor risks and trustworthiness	
Manage	Treat risks, respond and improve	

Gap check	Your answer
Current profile: what happens now?	
Target profile: what should happen?	

Part E · OECD principles in practice

For each OECD principle, write one practice the university could apply to the tool you chose in Part C.

OECD principle	A practice for our tool
Example: Transparency and explainability	Tell applicants when AI is used and give them clear reasons when it contributes to a rejection.
Inclusive growth, sustainable development and well-being	
Human rights, rule of law and fairness	
Robustness, security and safety	
Accountability	

Reflection

The university is not in the EU. Why might it still follow the EU AI Act?	
Which controls from Parts C to E could meet several rules at once?	

This scenario is fictional. It is a classroom exercise and is not legal advice.
